

POLESTAR APAC WEEKLY

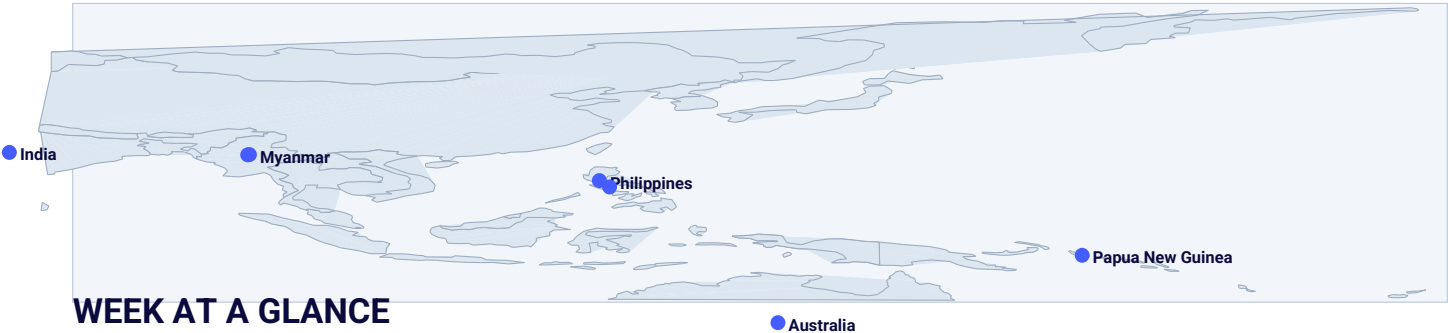

POLESTAR INSIGHTS

REPORTING PERIOD: 11 SEPTEMBER 2026 - 17 SEPTEMBER 2026

REGIONAL OUTLOOK

The APAC operating picture changed across India, Australia, Myanmar, Philippines, Papua New Guinea through operational disruption, regulatory. The selected evidence represents confirmed developments and decisions rather than reporting volume. Regulatory change in Australia is moving through personnel and travel, compliance and market access. Businesses should separate announced policy from the implementation guidance that determines practical exposure. Operational disruption in India, Myanmar, Philippines and Papua New Guinea affects personnel and travel, transport and supply chains, energy and utilities. The regional implication is route- and asset-specific, with persistence determined by restoration, rerouting or supply alternatives. Across India, Australia, Myanmar, Philippines, Papua New Guinea, the selected evidence points to differentiated controls for personnel and travel, transport and supply chains, energy and utilities, compliance and market access. Escalation depends on measurable spread or persistence; easing depends on verified restoration. Their shared business relevance is concentrated in personnel and travel, transport and supply chains, energy and utilities, compliance and market access, sites and assets, but the exposure is uneven: a policy transition, a weather-affected route, an airport interruption and a security development require different controls. 6 selected developments have specific forward indicators that should be carried into the 7 Day Watch. Risk would rise if disruption spreads geographically, restrictions reach commercial routes, implementation changes workforce or market-access obligations, or restoration fails. The next assessment should therefore prioritise official notices, reopening or recovery evidence, implementation guidance, route status and credible security changes. Markets without a selected development should not be elevated solely because they generated commentary.

REGIONAL RISK MAP

OPERATIONAL DISRUPTION	India: Operational Disruption exposure affects personnel and travel and transport and supply chains.
REGULATORY	Australia: Regulatory exposure affects personnel and travel and compliance and market access.
OPERATIONAL DISRUPTION	Myanmar: Operational Disruption exposure affects personnel and travel and sites and assets.
OPERATIONAL DISRUPTION	Philippines: Operational Disruption exposure affects personnel and travel and sites and assets.
OPERATIONAL DISRUPTION	Myanmar: Operational Disruption exposure affects personnel and travel and sites and assets.

WHAT CHANGED THIS WEEK

REGULATORY & POLICY

Regulatory change in Australia is moving through personnel and travel, compliance and market access. Businesses should separate announced policy from the implementation guidance that determines practical exposure.

BUSINESS & OPERATIONAL DISRUPTION

Operational disruption in India, Myanmar, Philippines and Papua New Guinea affects personnel and travel, transport and supply chains, energy and utilities. The regional implication is route- and asset-specific, with persistence determined by restoration, rerouting or supply alternatives.

OPERATING POSTURE

Across India, Australia, Myanmar, Philippines, Papua New Guinea, the selected evidence points to differentiated controls for personnel and travel, transport and supply chains, energy and utilities, compliance and market access. Escalation depends on measurable spread or persistence; easing depends on verified restoration.

KEY DEVELOPMENTS

India | Government cuts export duty across the board on petrol, diesel and jet fuel

Category: Operational Disruption

Current Severity: Low

What Changed: India reduced export-linked fuel taxation on petrol, diesel and aviation turbine fuel, changing the levy applied to outbound shipments.

Operational Impact: The measure changes fuel-export pricing and trade economics, with direct implications for fuel procurement, aviation cost assumptions and road-transport margins.

Polestar View: Low assessment: This is a policy-and-pricing change: the immediate question is how the revised export levy flows through fuel markets, procurement assumptions and transport margins.

Outlook 7 Days: Next seven days: watch the revised export-duty schedule, fuel-market pricing and any confirmed effect on aviation or road-transport procurement.

7 corroborating sources

Australia | Australia's migration overhaul: Crackdown on visa hopping, tighter rules for student families and visitor visas

Category: Regulatory

Current Severity: High

What Changed: Australia announced changes to migration or visa settings that alter eligibility, documentation or employer obligations.

Operational Impact: Employers may need to revise workforce eligibility, documentation and travel planning as implementation guidance becomes clearer.

Polestar View: High assessment: This is a transition risk: the business effect will be set by the implementation timetable and the practical interpretation of new eligibility rules.

Outlook 7 Days: Next seven days: watch official implementation guidance, employer-facing instructions and any change to the effective timetable.

Myanmar | Myanmar resistance drone strike forces Mandalay airport shutdown

Category: Operational Disruption

Current Severity: Moderate

What Changed: Myanmar saw a public-order or transport action that disrupted movement, services or site access.

Operational Impact: The action can interrupt public transport and employee movement; assess route alternatives, attendance constraints and any confirmed service suspension.

Polestar View: Moderate assessment: This is an immediate access constraint rather than a region-wide aviation assessment; restoration timing and diversion capacity will determine persistence.

Outlook 7 Days: Next seven days: track airport status notices, flight cancellations, alternate routing and restoration timing.

3 corroborating sources

Philippines | Manibela starts 2-day transport strike vs oil price hikes

Category: Operational Disruption

Current Severity: Low

What Changed: Philippines saw a public-order or transport action that disrupted movement, services or site access.

Operational Impact: The action can interrupt public transport and employee movement; assess route alternatives, attendance constraints and any confirmed service suspension.

Polestar View: Low assessment: The assessment remains conditional on duration and geographic reach; a wider operational consequence would change the current view.

Myanmar | Arakan Army Captures Three Outposts as Junta Border Offensive Triggers Fierce Clashes

Category: Operational Disruption

Current Severity: High

What Changed: Myanmar saw violence, military activity or access restrictions near affected routes or sites.

Operational Impact: The immediate exposure is to movement and site access near affected routes; operators should confirm route status and maintain alternatives rather than generalise the risk region-wide.

Polestar View: High assessment: This is a route-and-access security risk; deterioration would be indicated by territorial spread, additional restrictions or effects on commercial facilities.

Outlook 7 Days: Next seven days: track border notices, route restrictions, further clashes and credible indicators of displacement or access loss.

Philippines | Groups hold anti-Pax Silca protest in Angeles City

Category: Operational Disruption

Current Severity: Moderate

What Changed: Philippines saw a public-order or transport action that disrupted movement, services or site access.

Operational Impact: The action can interrupt public transport and employee movement; assess route alternatives, attendance constraints and any confirmed service suspension.

Polestar View: Moderate assessment: This is a route-and-access security risk; deterioration would be indicated by territorial spread, additional restrictions or effects on commercial facilities.

Outlook 7 Days: Next seven days: track border notices, route restrictions, further clashes and credible indicators of displacement or access loss.

Papua New Guinea | Panguna Landowners Interim Council condemn arson attack on LMEL Machinery in Panguna

Category: Operational Disruption

Current Severity: Low

What Changed: Papua New Guinea experienced an attack on machinery or a commercial site, creating a local asset-security and investigation issue.

Operational Impact: The immediate exposure is to site assets and local operating access; confirm machinery damage, investigation restrictions and whether the incident affects contractor or facility activity.

Polestar View: Low assessment: This is a site-asset security risk; the key uncertainty is whether damage, investigation restrictions or follow-on threats affect facility activity.

Outlook 7 Days: Next seven days: watch site-access restrictions, damage assessments, investigation findings and any repeat attack or contractor-safety notice.

BUSINESS IMPLICATIONS

PEOPLE & TRAVEL

The selected evidence links personnel and travel, transport and supply chains, energy and utilities to India, Australia, Myanmar, Philippines and Papua New Guinea. Travel and personnel exposure is concentrated in the named markets. Airport, border, flood and public-movement developments require route checks, traveller contingencies and a clear trigger for changing site-access controls.

OPERATIONS & ASSETS

The selected evidence links personnel and travel, sites and assets, transport and supply chains to Myanmar, Philippines and Papua New Guinea. Operational continuity exposure is location-specific. Flood, security and access changes should be mapped to affected facilities and recovery dependencies rather than treated as a region-wide operating downgrade.

SUPPLY CHAIN & LOGISTICS

The selected evidence links personnel and travel, transport and supply chains, energy and utilities to India, Myanmar and Philippines. Supply-chain exposure is driven by route availability, vessel or airport status and fuel economics. Logistics teams should confirm alternatives and restoration evidence before changing service assumptions.

REGULATORY & MARKET ACCESS

The selected evidence links personnel and travel, transport and supply chains, energy and utilities to India and Australia. Regulatory exposure is concentrated in implementation and market-access decisions. Compliance owners should translate effective dates and official guidance into workforce, documentation, pricing or trade controls.

7 DAY WATCH

2026-09-19 | Mumbai, India | Maratha reservation protest and indefinite hunger strike begins

The scheduled labour action may affect transport, staffing or site access in Mumbai, India. Current severity: High. Track organiser confirmation, transport changes and cancellation or postponement notices.

2026-09-19 | Tokyo, Japan | 9.19 anti war and constitutional mobilisation, 1530 outside the Diet main gate, marking 11

The planned gathering may affect access or security around Tokyo, Japan. Current severity: High. Track venue advisories, organiser confirmation and any police restrictions.

2026-09-19 | Auckland, New Zealand | March for Nature, gathering 1300 and marching from about 1330 against changes affecting conservation

Movement and access in Auckland, New Zealand may be affected by the scheduled activity. Current severity: High. Track route and venue advisories, transport changes and police restrictions.

2026-09-19 | Sydney, Australia | Sydney Walk for Life, scheduled from 1400

Movement and access in Sydney, Australia may be affected by the scheduled activity. Current severity: Moderate. Track route and venue advisories, transport changes and police restrictions.

2026-09-20 | Tokyo, Japan | "Protest the chaotic politics" street action, 1500-1630 in the Shinjuku pedestrian zone, followed by

The planned gathering may affect access or security around Tokyo, Japan. Current severity: High. Track venue advisories, organiser confirmation and any police restrictions.

POLESTAR OUTLOOK

Over the next seven days, APAC risk is most likely to be driven by regulatory and policy, business and operational disruption, operating posture. The priority markets are India, Australia, Myanmar, Philippines, Papua New Guinea, but the exposure is not uniform: operational consequences depend on whether an event affects a route, facility, workforce decision or compliance obligation. The most important near-term question is whether current disruption remains localised or begins to constrain wider movement, supply links or commercial access. 6 selected developments have specific indicators that should be checked through official notices and operating updates. Conditions could deteriorate around affected border and transport corridors, exposed flood routes, disrupted aviation links or locations where security restrictions are already tightening. Monitoring priorities are therefore reopening and recovery notices, implementation guidance, route and airport status, border controls, official warnings and credible evidence of territorial or access change. The assessment would move higher if restrictions spread, a closure persists beyond the expected recovery window, a policy enters force without workable guidance, or violence reaches commercial facilities and logistics routes. It would ease if services reopen, warnings are downgraded, implementation is clarified, or independent operating evidence shows that access and continuity have been restored. Businesses should assign these indicators to travel, site, logistics and compliance owners and update controls only when the relevant local evidence changes.
