

FUEL WATCH

POLESTAR INSIGHTS

REPORTING PERIOD: 24 MAY 2026 - 30 MAY 2026

POLESTAR-ADVISORY.COM

DATA STATUS: STATIC / IMPORT ONLY

LATEST RECORD: 23 MAY 2026

LAST UPDATED: 23 MAY 2026

EXECUTIVE SUMMARY

Fuel reporting was quiet this cycle. Treat that as a coverage gap rather than evidence that supply has stabilised. The market indicators in the Fast Facts and Jet Fuel Price Trajectory still carry the cost-side read; the incident layer simply has less to say this window. For business users, the standing exposures — fuel stock cover, generator runtime, road transport exposure and supplier resilience — remain the operational focus until fresh reporting lands.

FAST FACTS

BRENT CRUDE 109.3 USD/bbl +7.9% 7d Manual As of 15 May 2026	WTI CRUDE 101.0 USD/bbl +10.5% 7d Manual As of 15 May 2026	JET FUEL 4.152 USD/gal +2.5% 7d US Gulf Coast kerosene-type · EIA / FRED As of 15 May 2026
FUEL SHORTAGES / RATIONING 5 events reporting window	SUBSIDY / LEVY MOVES 1 policy event reporting window	FUEL-RELEVANT CHOKEPOINT PRESSURE 15 records Hormuz / route disruption

No related fuel incidents in the reporting window.

JET FUEL PRICE TRAJECTORY

US Gulf Coast kerosene-type jet fuel (USD/gal)

Latest 15 May: 4.15 USD/gal

US Gulf Coast kerosene-type jet fuel, 5 observations from 17 Apr to 15 May.

MARKET READ

Brent is sitting around 109.26 USD/bbl and WTI around 101.02 USD/bbl, which puts the crude complex in elevated territory rather than a transient spike. The jet fuel series is rising over the period, with the latest read at 4.152 USD/gal versus 3.709 at the start (+11.9%).

The combined read points to sustained cost pressure rather than a one-off move. Fuel-linked costs rarely stay isolated; they feed into freight rates, generator running costs, staff movement and supplier pricing — so the market indicators here should be treated as the cost-floor for any decisions further down the report.

SITUATION

Underlying exposure to shortage, subsidy change and refinery disruption remains, even on a quiet reporting cycle.

WHAT HAPPENED

Nothing classifiable on fuel landed in the window, so any read is inferred from the prior cycle rather than fresh evidence.

WHAT MATTERS

Transport cost, generator reliance and continuity at high-fuel-use sites stay the standing concern regardless of headline volume. With no fresh incident reporting this cycle, the market indicators above carry the read on their own; treat them as the cost floor for any forward planning.

IMPLICATIONS FOR BUSINESS

- On the cost side, revisit contract pricing on bulk fuel and any surcharge pass-through clauses in freight and logistics agreements — elevated indicators usually mean the next invoice cycle reflects this, not the current one.
- On the continuity side, check fuel stock at site, generator runtime assumptions and the fuel routes you rely on for resupply.

WATCH NEXT

- Subsidy or levy decisions — a single gazette notice can reset pump price and contract economics overnight.

POLESTAR VIEW

No usable fuel signal landed in the incident window this cycle, so the read leans on the market indicators above. Hold the prior cycle assessment, keep standing fuel-resilience measures live, and revisit the picture once the next batch of reporting arrives.
