

JAKARTA

POLESTAR INSIGHTS

REPORTING PERIOD: 24 JUNE 2026 - 30 JUNE 2026

BOTTOM LINE UP FRONT

Jakarta remains a manageable but disruption-prone operating environment. This week's reporting centred on protest activity, flooding and heavy rain and local crime in Central Jakarta and South Jakarta, with the main operational effect on movement and timings rather than any city-wide deterioration.

OPERATING PICTURE

This week's reporting centred on protest activity, flooding and heavy rain and local crime in Central Jakarta and South Jakarta, with the main effect on movement and timings.

Central Jakarta remains the main protest and government-district exposure. Across Greater Jakarta, weather and flooding remain the main movement-disruption issue. Crime remains a localised staff-safety and after hours movement concern. The overall picture is manageable but disruption-prone: routine movement can be affected by the combined effect of protest activity, heavy rain, congestion, crime and localised emergency-response activity.

KEY FLASHPOINTS THIS WEEK

Local crime reporting supports continued caution around after hours movement

MODERATE

Armed robbery / violent crime · Reported 28 Jun 2026 · Kompas

Reporting supports continued caution around after hours movement and exposed public areas near offices, hotels and transport hubs.

Central Jakarta protest and policing activity keeps government-district disruption risk active

HIGH

Protest / civil unrest · Reported 29 Jun 2026 · Jakarta Post

Demonstrations here can close roads and slow access around government buildings and central business districts; confirm routes and timings before travel.

North Jakarta flooding keeps commuter and airport-transfer routes exposed

HIGH

Natural hazard · Reported 27 Jun 2026 · Antara

Standing water on this corridor can lengthen commuting, site access and airport-transfer times; check affected routes before staff move.

MOVEMENT AND ACCESS IMPACT

- Central Jakarta government district: Protest activity was reported around the central government district this period. Check protest activity and hold alternative routes before travelling in.
- Main commercial & hotel areas: Crime was reported across the main commercial and hotel areas this period. Maintain caution around after-hours movement and exposed public areas.
- North Jakarta & port area: Flooding or heavy rain was reported around North Jakarta and the port area this period. Check affected routes on heavy-rain days and allow extra time.
- Greater Jakarta commuter belt: Protest activity was reported across the Greater Jakarta commuter belt this period. Check protest activity and hold alternative routes before travelling in.

BUSINESS DISTRICT EXPOSURE

Crime was reported across the main commercial and hotel areas this period. Protest activity was reported around the central government district this period. Jakarta's main business districts run along the Sudirman-Thamrin spine and the southern corporate clusters. Their density means localised disruption - protest, congestion or a security incident - translates quickly into delays for staff movement, client meetings and hotel access.

AREA	WHY IT MATTERS	ACTION
Sudirman-Thamrin corridor	Jakarta's primary office and banking spine; protest marches and road closures here directly affect staff movement and client meetings.	Confirm meeting venues and travel windows; keep alternative routes ready on protest days.
SCBD, Senayan and Gatot Subroto	Dense corporate towers, hotels and event venues concentrate staff and visitors in a compact area.	Brief staff on venue access; keep arrivals and departures flexible around peak congestion.
Kuningan and Mega Kuningan	Embassy, hotel and corporate cluster where localised security or protest activity can restrict access at short notice.	Verify access before client visits; keep situational awareness around hotels and offices.
Menteng and the central government fringe	Adjacent to government buildings and frequent protest routes, so spillover can close surrounding roads.	Check protest activity before travelling in; allow extra time on government-district approaches.

PORT AND LOGISTICS IMPLICATIONS

Flooding or heavy rain was reported around North Jakarta and the port area this period. North Jakarta and the Tanjung Priok port area drive the capital's logistics timings. Port congestion, low-lying flood-prone access roads and heavy industrial traffic mean delivery and collection windows need slack built in, especially during heavy rain.

AREA	WHY IT MATTERS	ACTION
Tanjung Priok port	Indonesia's main container port; congestion, labour action or access restrictions delay cargo movement and clearance.	Confirm port and terminal access; build slack into delivery and collection windows.
North Jakarta access roads	Low-lying approach roads flood readily and carry heavy port and industrial traffic.	Check flood status on heavy-rain days; stage time-critical shipments outside peak congestion.
Kelapa Gading and Ancol	Mixed commercial, residential and logistics areas prone to flooding and local congestion.	Allow extra time for deliveries and movement; verify routes after heavy rain.
Airport cargo corridor	Soekarno-Hatta air freight shares the same congested, flood-prone toll routes as passenger transfers.	Confirm toll-route status; allow buffer for time-sensitive air cargo.

PORT ACTIONS

- Confirm port and terminal access before dispatch; congestion and restrictions can change at short notice.
- Check flood status on North Jakarta approach roads during heavy rain and stage time-critical shipments accordingly.
- Build slack into delivery and collection windows around peak congestion periods.
- Brief drivers on alternative routes between the port, the airport cargo corridor and inland warehouses.

AIRPORT, HOTEL AND OFFICE IMPLICATIONS

Crime was reported across the main commercial and hotel areas this period. Airport transfers between the city and Soekarno-Hatta run on congested, flood-prone toll routes, so journey times can vary widely; allow a generous buffer and confirm the toll-route status before departure. Hotels and offices in the central and southern business districts concentrate staff and visitors, so localised protest, congestion or security activity can affect access and client meetings; confirm venues and keep arrival and departure timings flexible.

ROUTE AND TIMING GUIDANCE

- Allow generous time buffers on airport transfers and cross-city journeys; congestion is the default condition, not the exception.
- Check protest activity around Central Jakarta government locations before travelling in, and keep alternative routes ready.
- On heavy-rain days, check flood-affected routes across the commuter belt before staff move.
- Keep meeting and travel timings flexible so movement can shift around protest, flooding or congestion at short notice.
- Brief drivers on possible closures and alternative routes between offices, hotels, the port and the airport.

RECOMMENDED ACTIONS

- Check protest activity before travelling into the Central Jakarta government district.
- Build time buffers into airport transfers and cross-city commuter movement.
- Avoid unnecessary after hours staff movement in poorly monitored areas.
- Confirm flood-affected routes before staff travel.
- Keep local staff and drivers briefed on the day's disruption points.
- Escalate incidents near offices, hotels, client sites or main routes.

ESCALATION INDICATORS

- Larger protest activity around Central Jakarta government locations
- Heavy rain causing flooding on commuter or airport-transfer routes
- Crime or public-safety incidents near offices, hotels, malls, transport hubs or client sites

SEVEN DAY OUTLOOK

Over the next seven days, the most likely picture is localised disruption from protest activity, traffic, heavy rain and local crime rather than a city-wide deterioration. Movement planning - route checks, flexible timings and local verification - remains the main mitigation.

POLESTAR VIEW

Jakarta remains a manageable but disruption-prone operating environment. The main issue is not a single high-impact threat but the combined effect of protests, congestion, flooding and local crime on movement planning. Business users should focus on route checks, flexible timings, local verification and rapid reporting from staff and drivers rather than broad travel restrictions.

MAP AND AREA SUMMARY

AREA	MAIN EXPOSURE	OPERATIONAL RELEVANCE	ACTION
1. Central Jakarta government district ELEVATED · HIGH	Protest	Protest activity was reported around the central government district this period.	Check protest activity and hold alternative routes before travelling in.
2. Main commercial & hotel areas ELEVATED · MODERATE	Crime	Crime was reported across the main commercial and hotel areas this period.	Maintain caution around after-hours movement and exposed public areas.

AREA	MAIN EXPOSURE	OPERATIONAL RELEVANCE	ACTION
3. Soekarno-Hatta airport corridor MONITORED	Standing profile	No specific incidents were reported here this period; the area's standing movement and access considerations continue to apply.	Confirm local conditions before travel.
4. North Jakarta & port area ELEVATED · HIGH	Flooding / heavy rain	Flooding or heavy rain was reported around North Jakarta and the port area this period.	Check affected routes on heavy-rain days and allow extra time.
5. Greater Jakarta commuter belt ELEVATED · LOW	Protest	Protest activity was reported across the Greater Jakarta commuter belt this period.	Check protest activity and hold alternative routes before travelling in.
6. Main cross-city movement routes MONITORED	Standing profile	No specific incidents were reported here this period; the area's standing movement and access considerations continue to apply.	Confirm local conditions before travel.

Reporting this period was attributed to Central Jakarta government district, Main commercial & hotel areas, North Jakarta & port area and Greater Jakarta commuter belt; the remaining areas reflect their standing operating-exposure profile. Confirm local conditions before travel.
